

V20 COMPLETE AGENT PLATFORM - MASTER ARCHITECTURE

One native control plane owns routing, validation, evidence, persistence, correction limits, and final approval.

PAGE 2 - EXACT LANGGRAPH RUNTIME LIFECYCLE

Seven runtime nodes; controller-owned gates remain separate from specialist judgments and operator authority.

PAGE 3 - SPECIALISTS AND EXECUTION BOUNDARIES

Three independent profiles receive controller-injected state and return typed, evidence-backed outputs.

PAGE 4 - PERSISTENCE, EVIDENCE, MEMORY, AND KNOWLEDGE

Authoritative workflow records, immutable evidence, and operator-authored knowledge are separate domains.

PAGE 5 - OPERATOR SURFACE, AUTHORITY, AND FINAL ACCEPTANCE

The local CLI exposes inspection and persisted decisions; the operator remains the final authority.

AUTHORIZED LOCAL / REVERSIBLE

+ Inspect repository, state, receipts, and evidence

+ Run tests and deterministic validation

+ Write documentation and narrow non-critical fixes

+ Perform read-only research and pipeline/feed inspection

+ Cancel or reject through explicit operator commands

EXPLICIT APPROVAL REQUIRED

! Credentials, providers, brokers, accounts, or orders

! Trading parameters, risk limits, positions, or capital

! Schedules, paid compute, GPU/cloud training, deployment

! Model training, family change, promotion, active artifact

! Protected-data writes, destructive actions, broad cleanup
